BPMN 2.0 — as-is versus to-be

The as-is model keeps every manual handoff and the rework loop; the to-be model shows what the system does on its own and what staff still decide.

As-Is · paper-based non-collateral micro-loan processing at a branch. Manual handoffs in bold, rework loop drawn between the officer's checklist and the borrower.

To-Be · the same micro-loan with the tracking system. Shaded tasks are performed automatically by the system; white tasks are still human work.
